Chapter 1: Getting Started

Handset Safety Information

Never use your handset under the following conditions:

- in the vicinity of electrical detonators
- in shielded rooms
- in areas where radio transmission is forbidden

Do not place a handset near:

- water, moisture or damp areas
- heat sources, direct sunlight or unventilated areas
- devices which generate strong magnetic fields such as electrical appliances, fluorescent lamps, computers, radios, televisions or fax machines
- areas where the handset can be covered, its ventilation impaired, liquid spilled on the unit or objects inserted into the handset through any openings.
- areas with temperature extremes

Check for small metal objects in the handset earpiece and mouthpiece before using the handset.

Do not store or locate flammable liquids, gases, or explosive materials in the same compartment or vicinity as the cordless handset, its parts or accessories.

Warning

Excessive use of earphones and headphones can cause hearing loss.

Charger Information

One type of charger can be used for the handset.

The part numbers for the Spectralink 7420 and Spectralink 7440 charger and power supply unit are the following:

- Charger part number: 8464 2462
- Power Supply Unit part number: 8464 2602

Note

The charger can only be used with this specific power supply unit.

Battery Information

The battery is connected to the handset when it is shipped from the factory. To change the battery you must unscrew the plate on the rear of the handset to access the battery compartment.

To remove the battery cover, use a normal screw driver. Insert it into the small crack behind the blind cover and break to open the handset.

You can find the product label, including the CE logo, in the battery compartment.

The only battery that can be used for the Spectralink 7420 and Spectralink 7440 handset is the following:

- Battery part number: 8474 3411.

Charging the Battery

When you charge the battery for the first time, you must leave the handset in the charger for 14-16 hours for the battery to be fully charged.

During normal operation, it takes approximately 3.5 hours to charge the handset from completely discharged to its full capacity.

Place the handset in the charger. When the handset is turned on, the display shows the charging status in line 3.

For correct charging, ensure that the room temperature is between 0°C and 25°C. Do not place the handset in direct sunlight. The battery has a built-in heat sensor which will stop the charging if the battery temperature is too high.

When the handset is placed in the charger it reacts normally to incoming calls, it does not vibrate, and B-answer is inactive (B-answer is also called Automatic Answer). If the battery is fully discharged, up to 10 min. may pass before charging begins and the handset can be turned on. When charging begins, the status is shown in the 3rd line of the display and the LED flashes slowly.

It is necessary to recharge the battery when the display shows BATTERY LOW, or if it cannot be turned on. The LED flashes at a low frequency while charging and lights constantly when the charging is finished. The display goes back to normal mode when fully charged.

Battery Capacity

The capacity of the battery depends on the use of backlight and talk time.

- Battery capacity
 - Active talk time: up to 15 hours
 - Standby time: up to 150 hours
